

Jenkins Task-2

Task Description:

Create a simple script file and push it to repo. Create a project in Jenkins connected to your GitHub repository. When a commit is made to your repo, automatically build must get triggered from Jenkins and the output must be shared to me via email.

Techstacks needs to be used :

- AWS EC2
- Github
- Jenkins

SCREENSHOTS:

```
tamil@Tamizh MINGW64 ~ (master)
$ mkdir jenkins-pipeline-demo && cd jenkins-pipeline-demo

tamil@Tamizh MINGW64 ~/jenkins-pipeline-demo (master)
$ echo -e '#!/bin/bash\n echo "Hello from Jenkins Pipeline! jenkins task-2 guvi project"' > script.sh

tamil@Tamizh MINGW64 ~/jenkins-pipeline-demo (master)
$ chmod +x script.sh

tamil@Tamizh MINGW64 ~/jenkins-pipeline-demo (master)
$ cat <<EOF > Jenkinsfile
pipeline {
    agent any

    stages {
        stage('Clone') {
            steps {
                echo 'Cloning repository...'
                checkout scm
            }
        }

        stage('Run Script') {
            steps {
                echo 'Running script...'
                sh 'bash script.sh'
            }
        }
    }
}
EOF

tamil@Tamizh MINGW64 ~/jenkins-pipeline-demo (master)
$ git init

tamil@Tamizh MINGW64 ~/jenkins-pipeline-demo (main)
$ git push -u origin main
To https://github.com/Sujishreek/jenkins-pipeline-demo.git
! [rejected]        main -> main (fetch first)
error: failed to push some refs to 'https://github.com/Sujishreek/jenkins-pipeline-demo.git'
hint: Updates were rejected because the remote contains work that you do not
hint: have locally. This is usually caused by another repository pushing to
hint: the same ref. If you want to integrate the remote changes, use
hint: 'git pull' before pushing again.
hint: See the 'Note about fast-forwards' in 'git push --help' for details.
```

```
tamil@Tamizh MINGW64 ~/jenkins-pipeline-demo (main)
$ git pull origin main --allow-unrelated-histories
remote: Enumerating objects: 3, done.
remote: Counting objects: 100% (3/3), done.
remote: Total 3 (delta 0), reused 0 (delta 0), pack-reused 0 (from 0)
Unpacking objects: 100% (3/3), 880 bytes | 73.00 KiB/s, done.
From https://github.com/Sujishreek/jenkins-pipeline-demo
* branch          main       -> FETCH_HEAD
* [new branch]     main       -> origin/main
Merge made by the 'ort' strategy.
 README.md | 1 +
```

```
tamil@Tamizh MINGW64 ~/jenkins-pipeline-demo (main)
$ git push -u origin main
Enumerating objects: 7, done.
Counting objects: 100% (7/7), done.
Delta compression using up to 16 threads
Compressing objects: 100% (6/6), done.
Writing objects: 100% (6/6), 812 bytes | 40.00 KiB/s, done.
Total 6 (delta 1), reused 0 (delta 0), pack-reused 0 (from 0)
remote: Resolving deltas: 100% (1/1), done.
To https://github.com/Sujishreek/jenkins-pipeline-demo.git
f90e8de..0341823 main -> main
branch 'main' set up to track 'origin/main'.

New Item

Enter an item name

mypipeline

Select an item type

- Freestyle project**
Classic, general-purpose job type that checks out from up to one SCM, executes build steps serially, followed by post-build steps like archiving artifacts and sending email notifications.
- Pipeline**
Orchestrates long-running activities that can span multiple build agents. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.
- Multi-configuration project**
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.
- Folder**
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.
